

Instructions for making a 3-D “pop up” model of the atmosphere:

1. Color and then cut out all of the pieces.
2. Fold the “spheres” along the dotted lines and glue them to another piece of paper so that they go in order from lowest elevation to highest.
3. Match the symbols with each layer and glue them on. For example, the international space station should go in the thermosphere, and the ozone graphic should go in the stratosphere, etc.
4. Fold the Earth and glue the bottom half of it just before the troposphere layer.

This page is intentionally left blank so that the templates can be cut out
