

### *Painting with a Scientist 8: Penguins*

*Adapt this art project to the time and materials you have on hand! You can paint a square canvas with acrylics like Science Mom does in the demonstration, or color this page using markers, crayons, or colored pencils. Whichever approach you take, we hope you enjoy learning about these incredible birds along the way!*

#### *Three Cool facts:*

- *A group of penguins in the water is called a raft. A group of penguins on land is called a waddle.*
- *Penguins have no teeth. In order to eat they use barbed tongue and throats. They also swallow stones to aid in digestion.*
- *There are between approximately 17 species of penguins worldwide, all of which live in the southern hemisphere except for the Galapagos penguin, which lives at the Galapagos islands situated near the equator.*
