FACT OR FICTION?

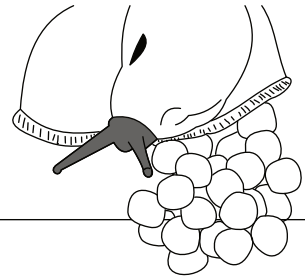

Pollination done by snails is called malacophily

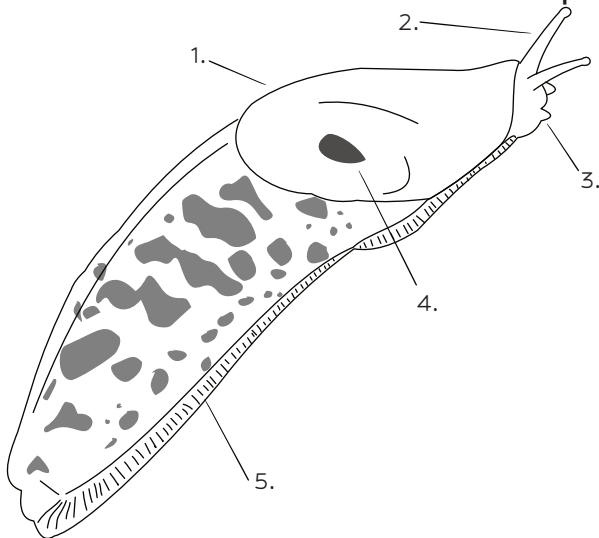

Like sharks, Slugs and snails can have thousands of teeth in a lifetime

A single slug or snail lays up to 100 eggs several times each year, accumulating up to 90,000 descendants during its lifetime

Match each feature with its corresponding function:

- 1 Mantle
- 2 Upper Tentacles
- 3 Lower Tentacles
- 4 Pneumatophore
- 5 Foot

Allows air to enter the mantle cavity, which acts as a lung.

Enables the slug to move by making rhythmic waves of muscular contraction while secreting mucus

Protects internal organs and may house a vestigial shell

How the slug sees and smells its surroundings

How the slug tastes things
