SCIENCE MOM'S

Guide to WATER, Part 1

c) Kemone pand and be amazed! (nwop

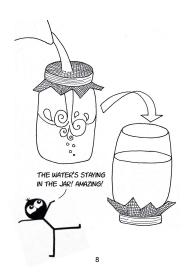

INVERT the cup (turn it upside b) Place one hand on the lid and the lid on top.

s) Pour water in the cup and place :bodieM

- cardstock or cardboard.
- · Plastic lid or a piece of dnO •
 - · Water

Materials:

1. Gravity Defying Lid

2. Magic Screen

Materials:

- Water Lid
- · Canning jar with a metal ring
- · A piece of screen or other mesh fabric

Method:

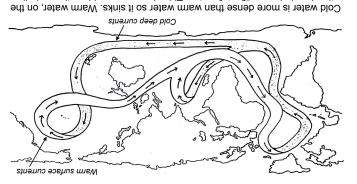

- a) Fill jar to rim and secure screen over the top.
- b) Cover with lid and flip over. c) Remove lid and observe.

use a cup and rubber band.

But be sure the screen or mesh is FLAT - 1700 mesh is FLAT and TIGHT across the rim of the cup

13 marine life and the earth's climate. steadily circulates all the water in the oceans and strongly influences both circulation in the oceans—a massive system of currents that slowly but other hand, rises or "floats" on top. This phenomenon drives thermohaline

Water is the only thing on our planet that exists naturally in all three states of matter-as a solid, liquid, and a gas.

Gaseous water, or water vapor, is invisible. You can't see it, but it's in the air around you and we call it humidity. The more water vapor in the air, the more humid it is.

The only other things on earth that come close to existing in all three states of matter are mercury, acetic acid, and carbon dioxide. While all three states of matter are **possible** for each of these, they don't occur **naturally**. Water, on the other hand? It's everywhere.

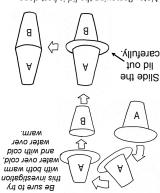

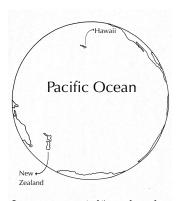

The water molecules are sticky, or cohesive. They are attracted to each other and the jar and the screen. That attraction is strong enough that they effectively form a "lid" on the bottom of the jar, just like the plastic lid did in the first investigation. If air doesn't come in, the water can't go out. So the water stays inside-until you shake or tip the jar. If you do either of those things, then gravity wins.

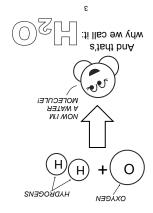

15

steady while the other pulls out the lid. with two people: one to hold the cups Note: Removing the lid is best done

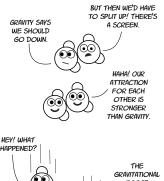

Oceans cover most of the surface of the earth, and at any given time about 50-70% of the planet is covered by another form of water: clouds.

If a 1 oxygen atom plus 2 hydrogens. WHAT EXACTLY IS WATER?

GRAVITY SAYS

FORCE OVERCAME OUR **(30** HYDROGEN 10
